SKILLS

Advanced

- Java
- Python
- Android Studio
- React
- Typescript

Intermediare

- PHP
- PL/SQL
- C#
- C
- NoSQL

Beginner

- BabylonJs
- Go

EDUCATION

Master in Computer Engineering September 2023 - August 2026

Polytech Nice Sophia, France

Computer Science BUT September 2021 - July 2023

University Institute of technology Nice
Côte d'Azur

PUBLICATIONS

Model Cards for Responsible AI: Stop Carding, Start Modelling - Co-author

LANGUAGES

- French - Native
- English - TOEIC (830)

SOFT SKILLS

- Autonomous
- Persistent
- Team spirit

SUMMARY

Software Engineer with experience in full-stack development and research-driven software projects. Skilled in building scalable applications, designing robust solutions, and contributing effectively within collaborative teams. Seeking a Software Developer position to apply my expertise and continue growing in a dynamic and innovative environment.

EXPERIENCE

Software Developer - Work-Study Program

Airbus Defense And Space • Sep 2023 – Sep 2026

- Participated in migrating an application to a web-based version, improving accessibility and usability.
- Developed RESTful APIs and web interfaces to streamline service integration and usage.
- Automated cloud workflows in Go on GCP, optimizing operational efficiency and reducing infrastructure costs.

Research Assistant - Fixed-term Contract

McSceart McMaster University • May 2025 – August 2025

- Developed and maintained JpipeRunner, a Python-based tool for data pipeline orchestration, improving automation and reproducibility of research workflows.
- Deployed and configured the application in Linux environments (Ubuntu), managing dependencies with Homebrew and pip.
- Co-authored a research paper: "Model Cards for Responsible AI: Stop Carding, Start Modelling".
- Collaborated with an international research team on AI and software engineering topics.

Fullstack development - Internship

Busit SAS • apr 2023 – aug 2023

- Development of different tools for the application
- Python (AI), PHP, Typescript, React, MUI

PROJECT

Olympic Odyssey - 3rd Place, Games On Web Tournament (60+ teams)

React, BabylonJS, Typescript, NextUI

- Developed a strategy-adventure game merging 4X and management elements, set in the Olympic Games universe. Collaboratively designed the game board, player movement mechanics, and UI components using BabylonJS, React, and TypeScript. Contributed to implementing key game systems, including dynamic hexagonal maps, player interactions, and a competitive points system.

ThermoScanAI – 1st Place, Interdisciplinary Project Challenge (20+ teams)

Project Management, Teamwork, Problem Framing

- Designed a solution combining drones and AI to detect and monitor urban heat islands. Defined a relevant use case by critically assessing where AI adds real value, avoiding unnecessary or superficial integration.
- Structured the project from problem definition to solution design, including data acquisition, analysis approach, and decision-support features for urban stakeholders.
- Collaborated in a full-time, one-week team project, contributing to ideation, system design, and final deliverables.
